# SILON'S WATCH

---

Rare

Level 3

This timepiece is a marvel of clockwork and miniaturization, immaculately crafted by dwarves hundreds of years ago. Within a small compartment under an intricate latching mechanism, the symbol of the Bronzeson family is carved, sometimes shining faintly.

This watch allows you to accurately track time down to the second, also indicating the current date and moons phases. Additional indicator dials tell information such as current humidity and pressure.

---

**Set Timer ♦:** [Interact] A small brass dial extends on the side of the watch, allowing the user to set a timer lasting up to an hour, with a precision down to the second. A bell mechanism within the watch rings at the end of the timer.
